

1 mm

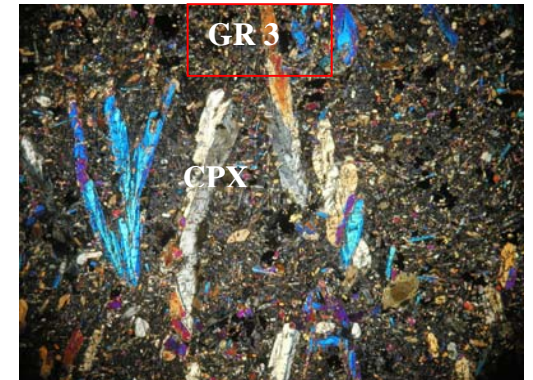

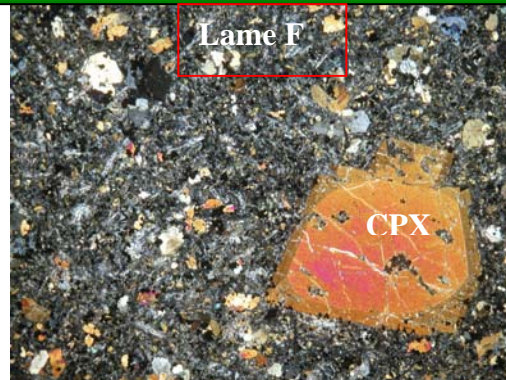

BOUR Ivan

**Planche 2 :**

Série de clichés de lames minces en lumière polarisée analysée (25x), correspondant aux deux principales générations de mise en place des dykes (pré flexure et post flexure).

Comparaison de la pétrologie et du fond textural.

Remarque : distinction de génération déterminée à partir d'une chronologie locale. Pour la localisation des échantillons, se reporter à la carte du chapitre 4.
